SUMMARY

Software Engineer with experience in automation, cloud integrations, and full-stack development. Proven ability to build scalable scripting solutions, support enterprise infrastructure, and lead automation initiatives across AWS and job scheduling platforms. Strong background in Python, JavaScript/TypeScript, and systems integration. Work history in the medical field presents a unique perspective on skills, working under pressure, and understanding of the healthcare system.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, PHP, SQL (MySQL, MSSQL), PowerShell, Bash

Web: HTML, CSS, REST APIs, React

Tools & Platforms: AWS, Control-M, Atomic OneAutomation, ServiceNow, Salesforce, Power Automate, Power Apps, Power Platform

Concepts: Automation, System Integration, Cloud Migration, Infrastructure Support

PROFESSIONAL EXPERIENCE

Navient — Software Engineer I

Indianapolis, IN | Nov 2023 – Apr 2026

- Developed Python-based automation scripts integrating Control-M with AWS services, improving job orchestration and system reliability
- Led migration of enterprise job scheduling from Atomic OneAutomation to Control-M, ensuring continuity during system transition
- Provided automation scripting support to development teams, reducing manual operational overhead
- Utilize ServiceNow REST API endpoints for environment automation and alerting.
- Supported IT wind-down initiatives, including application decommissioning and workflow migration

- Proven experience integrating 3rd party systems with existing/new systems by any means required showing flexibility on AWS, Linux, and Windows platforms.

Sim2K — Systems Administrator

Indianapolis, IN | Jun 2023 – Sep 2023

- Served as Tier II escalation point, resolving complex infrastructure and system issues
- Designed and implemented automation and infrastructure improvements for multiple clients
- Managed network, server, and workstation environments across diverse client systems
- Modernized client environments through infrastructure upgrades and improved system design
- Work with many smaller clients requiring the ability to translate technical needs and reasoning to non-technical end-users.

Sondhi Solutions — Consultant

Indianapolis, IN | Feb 2018 – Mar 2023

- Supported multi-client environments including networks, servers, and end-user systems
- Developed scripts and automation tools to streamline internal and client workflows
- Manually/programmatically orchestrated many use cases for Power Automate and Power Apps using PowerShell and other Microsoft solutions such as MDT, Task Scheduler, and Windows Registry.
- Familiarity with traditional best practices and stable architectures will help guide AI directives.
- Mentored junior technicians and contributed to team training initiatives
- Consulted on automation strategies and infrastructure improvements across organizations
- Began work on a side-lined project to build an employee onboarding application using Power Apps, Power Automate, and a Dataverse data connection.
- Completed Pluralsight Power Apps and Power Automate courses and built multiple small, practice applications to adapt to specific requirements in preparation.
- Work with non-technical users of all levels of skill to help understand complex IT requirements and methodologies.

PROJECTS

ServiceNow REST Integration | Dec 2025 – Present

- Built Python-based integration leveraging ServiceNow REST APIs to automate incident creation
- Implemented caching, configuration management, and structured logging for reliability
- Collaborated with developers to deliver production-ready automation solutions
- Implemented configuration files for future growth and customization
- Multiple similar integrations requested by other teams after the first ServiceNow integration.
- Each used a different deployment method: AWS Lambda, Unix Server, and Windows Server

AWS Wind-Down Transition Project | Jun 2024 – Present

- Led documentation and setup of Control-M SaaS environment in AWS
- Coordinated decommissioning of legacy Automic jobs and applications
- Ensured smooth application offboarding aligned with project timelines

Front-End Web Implementation | Jan 2020 – Apr 2020

- Implemented UI designs using HTML and CSS with JavaScript enhancements
- Collaborated with stakeholders to ensure accurate design delivery
- Assisted in debugging JavaScript and MVC-based components

Continuous Skill Development | Dec 2017 – Present

- 53 badges, 73,350 points on Salesforce Trailblazer following the developer path
 - Strong familiarity with low-code/no-code tools similar to Power Automate and Power Apps like Salesforce Flow Builder.
 - Use of AI as an intelligent, Google-like resource to support my development projects
 - My websites use a React front end and exclusively use REST APIs to perform server-side interactions like data pulls or updates.
-

EDUCATION

Ivy Tech Community College — AAS, Software Development

Indianapolis, IN | May 2020

- Certificates: Web Application Development, Java Development

Ivy Tech Community College — AAS, Paramedic Science

South Bend, IN | Dec 2014

- Certificates: EMS (EMT/Paramedic) 2010-2017, Firefighter I/II 2009. PSID# 7062-6225
-
